DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness

rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in

section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that

the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary

skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the

invention was made.

This application currently names joint inventors. In considering patentability of the claims

under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was

commonly owned at the time any inventions covered therein were made absent any evidence to the

contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and

invention dates of each claim that was not commonly owned at the time a later invention was made in

order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e),

(f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vollert, US

5,184,334 (Vollert) in view of Ecoffet, WO 01/40881 (Ecoffet) and Scalo et al., US 3,061,869 (Scalo).

For references to Ecoffet, see US equivalent case 6,719,455.

a. Regarding claim 1:

Vollert teaches a crown (46, Fig. 2) for a timepiece, including a head (10, Fig. 2), a central

portion (23, Fig. 2) and a lateral skirt (12, Fig. 2), said head including an end face.

Art Unit: 2854

Vollert does not teach an end face bearing a design, wherein the end face includes a substrate onto one face of which said design is applied, wherein said substrate is mounted so as to move in rotation in said head and wherein the crown further includes braking means arranged for holding said substrate in different angular orientations with respect to the head about the rotational axis of the crown.

Ecoffet teaches that it is desirable to have logos or designs on the end face of the crown, especially in luxury and high quality watches, and that it is desirable to have the logo always oriented properly (col. 1, lines 13-30).

Scalo teaches a control knob with an insert for the end face (36, Fig. 1), the insert including an o-ring (38, Fig. 3) for securing the insert into the end face of the control knob.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Vollert to include a logo or design on the end face of the crown, because Ecoffet teaches that logos are desirable on watch crowns.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Vollert to have an independently adjustable insert on the end cap, because Scalo teaches such an end cap, and one having ordinary skill in the art would recognize that this end cap would allow the user to easily adjust the position of the logo, and further to easily change the logo to a different design, if so desired.

Regarding claim 2, the combination of Vollert, Ecoffet and Scalo teach all that is claimed as b. discussed in the rejection of claim 1 above, including wherein said braking means act via friction (Scalo, Fig. 3).

Application/Control Number: 10/671,792

Art Unit: 2854

c. Regarding claim 3, the combination of Vollert, Ecoffet and Scalo teach all that is claimed as discussed in the rejection of claim 2 above, including wherein said braking means comprises an elastic annular element (Scalo, 38, Fig. 3, col. 2, lines 26-28).

- d. Regarding claim 4, the combination of Vollert, Ecoffet and Scalo teach all that is claimed as discussed in the rejection of claim 3 above, including wherein said annular element is elastic in a direction parallel to the rotational axis of the crown (Scalo, note orientation of o-ring in Fig. 3).
- e. Regarding claim 5, the combination of Vollert, Ecoffet and Scalo teach all that is claimed as discussed in the rejection of claim 1 above, including wherein said braking means are formed by an annular joint made of a compressible material (Scalo, 38, Fig. 3, col. 2, lines 26-28).
- f. Regarding claim 6, the combination of Vollert, Ecoffet and Scalo teach all that is claimed as discussed in the rejection of claim 1 above, including wherein the central portion is added onto the head, wherein said central portion includes a tube fitted with a disc at one of its ends (Vollert, 46, Fig. 2), wherein said substrate includes an annular edge and wherein said substrate is gripped axially via its edge between the disc and the head (Scalo, Fig. 3).
- g. Regarding claim 7, the combination of Vollert, Ecoffet and Scalo teach all that is claimed as discussed in the rejection of claim 6 above, including wherein said braking means are arranged between the disc and the substrate (Vollert, Fig. 2 and Scalo, Fig. 3).
- h. Regarding claim 8, the combination of Vollert, Ecoffet and Scalo teach all that is claimed as discussed in the rejection of claim 1 above, including wherein the crown is of the screw-on type (Vollert; screw threads in 22, Fig. 2).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Leo T. Hinze whose telephone number is (571) 272-2167. The examiner can

normally be reached on M-F 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Andrew Hirshfeld can be reached on (571) 272-2168. The fax phone number for the organization

where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained

from either Private PAIR or Public PAIR. Status information for unpublished applications is available

through Private PAIR only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the

Electronic Business Center (EBC) at 866-217-9197 (toll-free).
